# Serial Bluetooth adapter setup examples.

Direct cable replacement.

One to one communication between a computer and a serial device or between two serial devices. This is often used if the computer has no built-in Bluetooth or if you need an easy to setup cable replacement.
The advantage of this setup is that it is easy and fast to setup even if your computer or serial device does not have built-in Bluetooth.

Linking with built-in Bluetooth.

If your computer or serial device has built-in Bluetooth then you need only one serial Bluetooth adapter. One to one communication between built-in Bluetooth and serial device or between two serial devices.

Multi-point communication.

Ideal for applications where multiple links are needed, (max 255). Multiple COM ports are created at the local computer. Each COM port will show up in your computer's COM port and can be used as if it was a built-in COM port.

NORDFIELD
